发展历程

DEVELOPMENT HISTORY

2012.12

郑州总部生产基地投产

Zhengzhou headquarters manufacturing base put into production

2006

洛阳中德生产基地投产

Luoyang Zhongde manufacturing base put into production

2002.2

经上级领导批准入住国家郑州高技术产业开发区

Authorized to enter the Zhengzhou new hi-tech technical industry development zone China by the government

2005.4

成立矿山机器研究所并通过

ISO9001:2000

Found the mining machinery institute and passed the ISO9001:2000 international certificate of quality management system

前身 Predecessor

55201机器厂

55201 machinery factory

1995.11.15

成立股份制有限公司生产大型矿山机器

Found the joint-stock limited company to produce the mining machinery

1999

与冶金工业部金属制品研究院联营

Cooperated with the metal institute of metallurgy industry department

2001

为适应国际铁路、公路发展需求与郑州铁路局矿山机器厂联营批量生产重型路桥机

Cooperated with Zhengzhou railway station mining machinery factory to adapt the developing requirement of international railway and road, authorized to produce the heavy road bridge machinery

红星荣誉

HONGXING HONOR

红星简介 HONGXING INTRODUCTION

河南红星矿山机器集团公司是一家以生产重型矿山机器为主，集科研、生产、销售为一体的大型股份制企业，现拥有三个大型生产基地（红星机器、中德重工和沃特科技）。公司总部位于郑州高新技术产业开发区，占地共35万平方米，拥有26万平方米标准化重型工业厂房，各种大、中型金加工、铆焊、装配设备600余台，在线员工2300余人，其中具有中、高级职称的管理干部和工程技术人员360余人。公司先后引进了美国、德国、日本、澳大利亚等国家的先进技术和工艺，建立了国际先进的生产线和一流的现代化检测基地，并成立了砂石机器研究所、磨粉机器研究所、选矿设备研究所和建材设备研究所。公司以科学的管理方法，精益求精的制造工艺，用于创新的制造理念迅速壮大成长为全国高端矿山机械生产和出口基地。

红星集团视质量为生命，奉用户为上帝，并一贯遵循对每一道工序负责，对每一台产品负责，对每一位用户的负责的质量方针，竭诚为用户服务。现公司产品已通过ISO9001、CE和GOST国际质量体系认证，公司生产的“红星牌”机器获得了“中国著名品牌”和“中国矿山机器十大品牌”等多项殊荣。可靠稳定的质量使公司产销量及各项综合经济指标居国内同行业的前列，数万家用户遍布全国，并远销一百多个国家。

公司主要生产有破碎设备、制砂设备、选矿设备、磨粉设备和建材设备五大系列产品。同时公司可为用户提供项目设计，工艺流程设计，标准和非标准产品设计及生产。红星集团用产品抢占市场，用服务创造市场，用品牌引领市场。“铸红星品牌，让用户满意”是红星永恒的追求。

Henan Hongxing Ming Machinery Co.Ltd is joint-stock mining machinery manufacturing enterprise integrated in scientific research,production and marketing for now possessing three large manufacturing bases(Henan Hongxing,Luoyang Zhongde and Zhengzhou Wort)The head quarter of HongxingGroup is located at the High&New Technology industries Development Zone of Zhengzhou,China with an area of 350,000m²,which includes 260,000m² of standard heavy duty industrial workshop.There are more than 600 equipment,including large and medium sized metal processing,riveting and Installing equipment.There are more than 2300 workers including 360administrators with secondary and senior occupational titles and engineering technicians.In Order to promote the competitive strength,the advanced technologies have been introduced from America,Germany,japan and Australia to establish the international advanced production line.first-class modern testing base as well as research centers of sand makling powder grinding,ore beneficiation and building material equipment.Scientific management,advanced processing technology and innovative manufacturing theory make the company become the high-end mining machinery manufacturing and exporting base in China.

Hongxing Group lays much emphasis on the quality and clients,We serve clients with the quality guideling of being responsible for every working procedure,every product and every client.What we have done is for the clients and we believe that qualityis the best way to developmarket.All of the products have passed the au then tication of ISO9001,CE and GOST Hongxing Brand is the Chinese Fam ous Brand.Reliable and stable quality is the key to access;our products are well known at home and abroad Now we have tens of thous ands of usersthrough out China and more than 100 world markets.

Our main products in clude five series,they are:crushing equipment,sand making equipment,ore beneficiation equipment,milling equipment and building material equipment Moreover,we can provide program design,process flow design,standard and non-standard design for clients Hongxing Group occupies market by products,creates market by service and leads market by popularity,Establish of Hongxing Brand for satisfaction of users is the persistent pursuit of Hongxing.

STRONG PRODUCTIVE CAPACITY

强大的生产能力

河南红星矿山机器有限公司占地100000平方米，拥有60000平方米重型工业厂房两座，各种大、中型金加工、铆焊、装配设备200余台,装配最大起吊能力300吨，是目前国内矿山机械主要的生产和出口基地。

Henan Hongxing Mining Machinery Co.,Ltd covers an area of 100,000 square meters which includes 60,000 square meters of heavy duty industrial workshops. Our equipment includes more than 200 sets of large and medium sized metal processing, riveting and installing machines, the maximum lifting capacity is 300 tons. Our company has become a major mining machinery manufacturer and export base in China.

LEADING TECHNOLOGY RESEARCH

超前的技术研发

河南红星下属三个国家级机器研究所，研发人员120余人，其中博士10人，硕士30人，拥有50余项国家级专利技术，并且与科技部及各大场院校建立了良好的合作关系，保证了红星产品在同行中步步领先，永立潮头。

With three state level machinery research institutes and more than 120 of employees for research&development, 10 with doctor,s degrees, 30 with master, s degrees and with more than 50 of state patents, Hongxing Company has established favorable cooperation relationship with department of science and technology as well as key universities and colleges, which guarantees the leading position in mining machinery manufacturing industry.

STRICT QUALITY CONTROL

严谨的质量管理

质量是我们的道德范畴，我们生产货真价实的产品，产品即是我们的品，我们谨记，不遵守质量要求就会付出沉重的代价。

Quality is our moral category; our products are worth its price; products are our moral standing, we firmly believe that we would be punished by the market without good quality.

HYDRAULIC CONE CRUSHER

单缸圆锥破碎机

SC(S)系列单缸液压圆锥破碎机，采用世界最先进的破碎技术研发而成，集机械，液压，电气，智能控制等技术于一体。全新破碎机结构，结合优化的层压式破碎腔型，全智能自动化控制系统，使SC(S)系列单缸液压圆锥破碎机拥有传统圆锥破碎机无可比拟的性能特点。可以广泛地应用于中碎，细碎及超细碎作业当中。

SC(S) series single-cylinder hydraulic cone crusher, widely used in the intermediate, fine and ultrafine crushing process, is researched and developed by adopting the world's most advanced crushing technology, as well as integrating mechanics, hydraulics, electric, intelligent control and other technologies together. It has such advantages as brand new structure, optimized laminating crushing chamber, as well as the full intelligent and automatic controlling system, which makes the SC(S) series single-cylinder hydraulic cone crusher have the unparalleled performance characteristics that traditional cone crusher cannot compare such as various selectable chamber types, high crushing efficiency, low cost of production, convenient adjustment and maintenance, cubic finished products size, etc.

工作原理

单缸圆锥破碎机工作时：电机带动破碎机的小齿轮，小齿轮带动大齿轮，大齿轮组件带动偏心套组件和主轴组件，以理论垂直线为中心，在铜衬套内公转，主轴组件在偏心铜套内以主轴的中心线可以实现自转。空机运行的时候，偏心套组件“抱着”主轴组件和随大齿轮一同公转，当物料加入到破碎腔后，主轴总成在物料的阻力下在偏心铜套内缓慢的自转。内锥的运行轨迹看起来是在破碎腔内来回摆动，同时缓慢的旋转。物料被摆动的内锥挤压破碎。支撑套与架体连接处靠液压缸压紧，当破碎机内落入金属块等不可破碎物体时，单缸的动锥由底部液压活塞托起，起到排放口调整和过铁保护、反复起落排除堵矿的作用。

Working Principle

When single-cylinder hydraulic cone crusher works, the electro motor drives the pinion of the crusher, the pinion drives the rack wheel, the rack wheel assembly including rack wheel, rack wheel brace and eccentric steel bushing drives the eccentric bushing assembly including eccentric cylinder liner and eccentric copper bushing and the spindle unit including principal axis, inner cone and inner cone lining plate to revolves around the theoretical perpendicular line inside the copper bushing and the spindle unit can realize rotation around the central line of the principal axis inside the eccentric copper bushing.

HYDRAULIC CONE CRUSHER

多缸液压圆锥破碎机

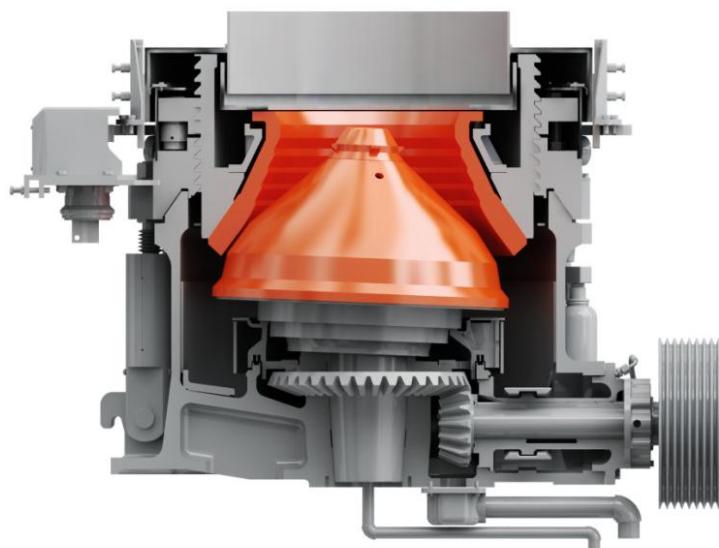

HXHP系列多缸圆锥破碎机是我公司自主研发的适合于破碎高硬物料，且对产品粒形要求严格的新型圆锥破碎机，该机比传统弹簧圆锥破碎机性能更优越。

HXXP Series Multi-Cylinder hydraulic Cone Crusher is the Latest model designed by our company, mainly used for hard material crushing. HXXP Series Cone Crusher has much better performance than the Spring Cone Crusher, it has bigger capacity and better final products shape.

工作原理

在工作时通过电动机的旋转带动带轮或联轴器、传动轴和圆锥部在轴心线下使偏心轴做周期性旋摆运动。在物料从料口进入破碎腔后因受到偏心轴和轧臼壁的相互冲击挤压、研磨、揉搓从而产生破碎的作用。液压保险系统能在机器发生过铁故障或者闷车现象时通过液压将支撑套和定锥部顶级排除出故障物，在起到很好的保险作用的同时大大的降低了维修率及提高生产效率。

Working Principle

When cone crusher begins to work, the electro motor drives the eccentric sleeve through the spring coupling, drive shaft and a pair of angle gear, so that the crushing wall of cone crusher gets close to and then gets away from the surface of the rolling mortar wall fixed on the adjusting sleeve, and the ores inside the crushing chamber will be constantly impacted, squeezed and bent to be crushed.

HYDRAULIC CONE CRUSHER

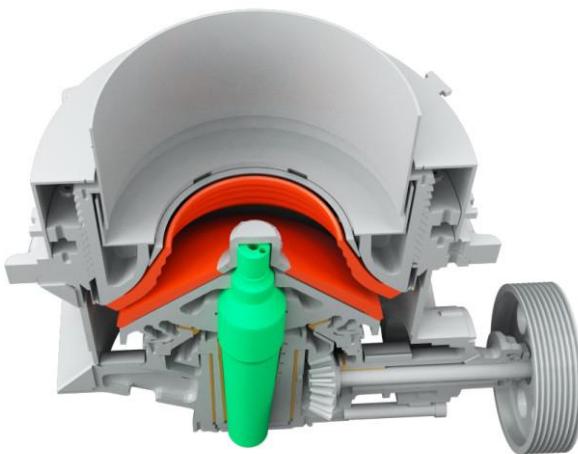

全液压圆锥破碎机

HXGYS圆锥破碎机是我公司结合单缸液压圆锥破碎机与pyf圆锥破碎机，采用了先进的设计理念，经优化设计而成的新型圆锥破碎机，由于采用了较佳的破碎频率和偏心距，使破碎产品中细粒级含量更高，小于闭口边排料口粒的含量可达80%，这样能显著地提高后续工序的处理能力，降低综合能耗。

高性能破碎腔型与高破碎频率的圆满结合，使得本机处理能力大大提高，又由于采用了层压破碎原理，故破碎产品多为立方结构，极大程度上减少了针片状物料。

HXGYS series hydraulic cone crusher is the latest model of our company,it combines the advantages of single cylinder cone crusher and PYF cone crusher,and it adopts a more advanced design concept.Better crushing frequency and uneven distance is used,so content of the fine grains is higher in crushing products.

Perfect combination of high performance crushing cavity and high crushing frequency improve its processing capacity greatly.And because of adopting laminated crushing principle,most of stone crushing machines are cubical shape.

工作原理 working principle

本机性能可靠，操作方便。由于进行了优化设计，并对破碎机进行液压保护，其设备故障率大大降低，在正常使用情况下，设备无故障运行率将超过85%。

Optimum design and hydraulic protection make it have fewer breakdowns.Generally, its fault-free operation ratio can surpass 85%.

突出优势 highlight advantages

采用全液压操作，使用方便，易于实现自动化，其可靠性和寿命大大提高。

结构简单，便于操作，维护，排料口调整方便快捷，检修省时省力，特别是衬板易于快速更换，减少了停机时间。

PYG Multi-cylinder hydraulic cone crusher adopts entirely hydraulic operation, which is easy to use and realize automation, so its reliability and using life are improved greatly.

Simple structure easy to operate and maintain, the convenient and fast adjustment of discharge opening. Especially, the lining plate is very easy to be replaced quickly, which reduces stoppage time.

HYDRAULIC CONE CRUSHER

复合型圆锥破碎机（西蒙斯）

PSG系列圆锥破碎机广泛应用于冶金工业、建材工业、筑路工业、化学工业与硅酸盐工业中，适用于中等和中等以上硬度的各种矿石和岩石，本机具有破碎比大、效率高、处理量高、运作成本低、调整方便、使用经济等特点。由于零件选材与结构设计合理，故使用寿命长，而破碎产品的粒度均匀，减少了循环负荷，在中、大规格破碎机中，采用了液压清腔系统，减少了停机时间，且每种规格的破碎机腔型多，用户可根据不同的需要，选择不同的腔型，以更好地适应用户需要。本机密封采用润滑脂密封，避免了给水及排水系统易堵塞的弊病及水油易混合的缺陷，弹簧保险系统是过载保护装置，可使异物、铁块通过破碎腔而不危害破碎机。本机分为标准型和短头型，一般而言，标准型给料粒度大，排料粒度也较粗，短头型的破碎锥较陡，给料粒度小，有利于生产细粒级的物料，故标准型一般用于粗、中碎，短头型用于中、细碎。

PSG series cone crusher is widely used in metallurgy, construction, road building, and chemical and hydrated silica industry. It can crush many kinds of ores and rocks with medium and above medium hard scale. This machine has the features of big crushing strength, high efficiency, large capacity, low cost, easy to adjust and economic usage etc. It has the long life span because of the components material and reasonable structure. The evenly particle size of finished product reduces the circulation load. The hydraulic chamber-cleaning system in medium and large sized crushers reduces the machines stop time. There are many chambers type of each machine and then customers have many choices to meet their demands. This machine adopts the lubrication grease seal system and avoids the defects of water-supplying and discharging block as well as the easily mix of water and oil. The spring insurance system is overload protection device; it can make the foreign matter and iron ore go through the crushing chamber and not damage it. This machine can be divided into standard type and short head type. Generally speaking, standard type has the big feeding size and the coarse discharging size. The short head type has steep crushing awl and the feeding material size is small, it is helpful to produce the very small sized material. Then the standard type is used for coarse and medium crush and short head type is used for medium and fine crush.

突出优势 highlight advantages

机体为铸钢结构，在重载部位设置有强筋，密封性能好；由于有保险装置，大大减小了停机时间。

圆锥破碎机包含液压调整机构，便于快速调整机器排料口大小。

圆锥破碎机采用一套外置的包括油泵、油箱、管路的润滑系统。当油温过高或油流速过慢时将自动关闭破碎机。

模块化设计，通过更换腔型，即可实现粗、中、细碎的转换，提高生产效益。

The machine body is of casting steel structure; Heavy steel bars are set in the heavy load parts; High sealing performance; Downtime is greatly reduced by the insurance device.

Cone crusher includes the hydraulic adjustment structure, which can make it easily adjust the discharging outlet size.

Cone crusher adopts a set of oil pump, oil tank, and pipeline lubrication system externally. The crusher will shut down automatically when the oil temperature is too high or the oil flow rate is too slow.

A adopts modular design, achieve the change among coarse, medium and fine materials by adjusting the chamber-type, so to improve the production efficiency.

EUROPEAN TYPE JAW CRUSHER

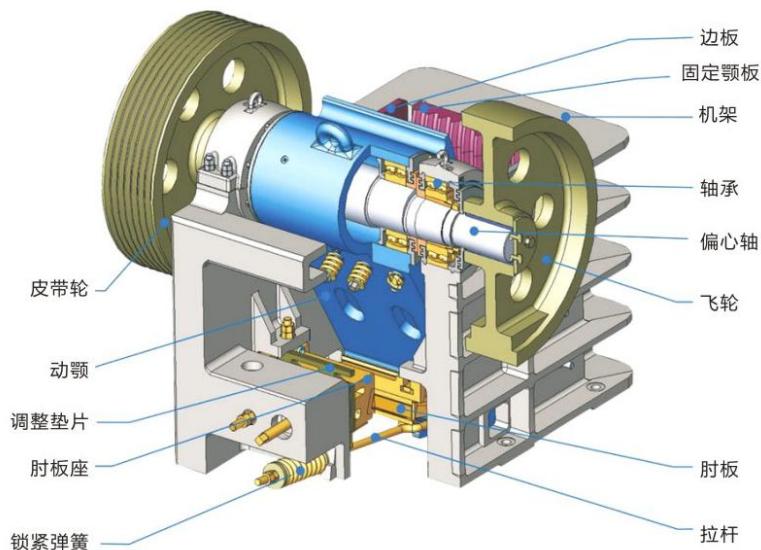

德版鄂式破碎机

在矿山和建筑破碎行业，处于生产线前端的鄂式破碎机，其性能直接影响全套生产线的质量与运行情况，这使人们对鄂破的产能和稳定性要求越来越高。根据市场需求，红星机器以自20多年的破碎行业工程案例经验，与德国破碎机专家联合开发的HD系列高性能鄂式破碎机，为矿山和碎石生产线提质提产带来新的突破。

HD德版鄂式破碎机的特点在于将破碎腔型、运动参数的优化设计完美配合，不仅使机器产能和产品质量大大提升，而且扩大了产品应用范围。HD可广泛应用于金属和非金属矿、建筑、砂石、水泥、冶金等各个行业，在处理坚硬物料方面，有着出色表现。

In mining and crushing industry,jaw crusher,as the primary crusher in a crushing line,its performance plays an important role in the running of complete crushing line; therefore,users have an increasing demand on the capacity and stability ofjaw crusher.In accordance with the desired market, engineers in Henan HongXing Mining Machinery Co. , Ltd, combining 20-year experiences in the crushing industry, have developed HD high-efficiencyjaw crusher together with Germanengineers; itmakesasignificant \ breakthrough ofcapacity and quality—improving in the crushing production line.

With the perfect optimization ofcrushing cavity and working parameters, HD jaw crusher stands out in terms of a higher capacity and superior product quality, and wider availability as well. It can be used in various industries, such as metal andnon-metallic ores, construction, sand and stone crushing, cement and metallurgy, especially doing well in crushing hard materials.

工作原理 working principle

鄂式破碎机工作时，活动颚板对固定颚板作周期性的往复运动，时而靠近，时而离开。当靠近时，物料在两颚板间受到挤压、劈裂、冲击而被破碎；当离开时，已被破碎的物料靠重力作用而从排料口排出。

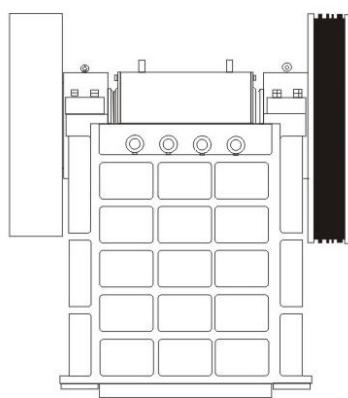

物料从顶部入口倒入含有颚齿的破碎室，颚齿以巨大力量将物料顶向室壁，将之破碎成更小的石块。

偏心运动通常由固定在轴两端的飞轮所产生。飞轮和偏心支持轴承经常采用球面滚子轴承，轴承必须承受巨大的冲击载荷，磨蚀性污水和高温。

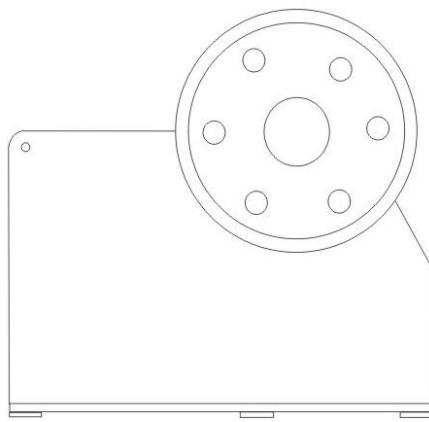

突出优势 highlight advantages

- 1、噪音低，粉尘少。
- 2、其破碎比大，产品粒度均匀。
- 3、结构简单，工作可靠，运营费用低。
- 4、润滑系统安全可靠，部件更换方便，设备维护保养简单。
- 5、破碎腔深而且无死区，提高了进料能力与产量。
- 6、设备节能：单机节能15%~30%，系统节能一倍以上。
- 7、排料口调整范围大，可满足不同用户的要求。

PCZHEAVY HAMMER CRUSHER

PCZ新型重锤式破碎机

PCZ型重锤式破碎机，广泛应用于矿山，冶炼，建材，公路，铁路，水利和化学工业等众多行业。特别适用于破碎石灰石及抗压强度低于200Mpa中等硬度的石料。

PCZ型重锤式破碎机，可以破碎石料，一次成型，无需二级破碎整形过程，可以降低成本40%左右，耗能低，投资少。

PCZ heavy hammer crusher is widely used in the works of mine, smelting, building material, road, railway, irrigation, chemical industry, etc. It is especially used to crush limestone and medium hard materials which compression strength are less than 200Mpa. PCZ heavy hammer crusher is used to crush stone, molding at a time, without a secondary crushing. There is 40% cost reduction with low energy consumption and small investment.

工作原理 working principle

PCZ锤式破碎机是利用装在机壳内高速旋转的锤头动能而击碎物料。破碎机工作时，待破碎物料由喂料设备经入料口送入破碎腔，高速旋转的转子带动锤头首先对大块物料进行第一次打击，物料被锤头冲击破碎或抛向反击板；获得动能后的物料高速撞向反击板或与破碎腔内其他料块相互碰撞而再次破碎；物料在碰撞过程中逐渐向破碎腔下部的活动反击板移动，当物料粒度小于锤头与活动反击板之间的间隙时，在自重和其它物料的挤压下脱离破碎腔。物料在破碎腔内经过了铁打石、石打石、石打铁的多个破碎过程，最后由下料斗排出。

突出优势 highlight advantages

降低成本，耗能低

PCZ型重锤式破碎机破碎石料，一次成型，无需二级破碎整形过程，可以降低成本40%左右，耗能低、投资少。

石料应用广泛

PCZ型重锤式破碎机特别适用于破碎石灰石及抗压强度低中200Mpa等硬度的石料。

Cost-saving;Low Energy-saving

PCZ Heavy hammer crushers, shape up by single crushing without second time. so to reduce the cost by around 40% which ensure energy and investment saving.

Vide Range Of The Stone Application

PCZ Heavy hammer crushers are especially applicable for crushing the limestone and medium-hardness stones less than 200Mpa.

IMPACT CRUSHER

反击式破碎机

反击式破碎机(反击破)是我公司在吸收国内外先进技术，结合国内砂石行业具体工矿条件而研制的最新一代反击式破碎机。它采用最新的制造技术，独特的结构设计，加工成品呈立方体，无张力和裂缝，粒形相当好，能破碎进料粒度不超过500mm、抗压强度不超过350MPa的各种粗、中、细物料（花岗岩、石灰石、混凝土等），广泛应用于各种矿石破碎、铁路、高速公路、能源、水泥、化工、建筑等行业。其排料粒度大小可以调节，破碎规格多样化。

Impact crusher,which can also be called impact breaker or impactcrushing machine which is mainly used for crushing oflarge,medium and small materials with side length less than 500mm and compression resistance no more than 350Mpa. Hongxing stone impact crusher is an optimized crushing machine after adopting advanced techniques at home and abroad and it is widely used in building material,hydrOelectricity, artificial stone and sand, highway, etc. This series ofproducts can proces sthematerialwith sidelength of100to 500mm. The compression strength can reach 350MPA. The advantages ofthe products are big reduction ratio and cubic shape ofthe crushed materials.

突出优势 highlight advantages

本系列反击式破碎机能处理边长100~500毫米以下物料，其抗压强度最高可达350兆帕，具有破碎比大，破碎后物料呈立方体颗粒等优点，适用于破碎中硬度物料，如水泥厂的石灰石破碎，具有生产能力大，出料粒度小的优点。

This series impact crusher is able to process the materials whose length of a side is below 100~500mm, the compression strength can reach 350Mpa.The advantages of the products are big crushing ratio and cubic shape of the crushed materials. It is suitable for crushing medium hard materials such as limestone in cement plant, and it has such advantages as big production ability and small discharging granularity.

工作原理 working principle

反击式破碎机是一种利用冲击能来破碎物料的破碎机械。本机工作时，在电动机的带动下，转子高速旋转，物料进入板锤作用区时，与转子上的板锤撞击破碎，后又被抛向反击装置上再次破碎，然后又从反击衬板上弹回到板锤作用区重新破碎，此过程重复进行，物料由大到小进入一、二、三反击腔重复进行破碎，直到物料被破碎至所需粒度，由出料口排出。调整反击架与转子之间的间隙可达到改变物料出料粒度和物料形状的目的。

Impact crusher is a kind of crushing machine that uses impacting energy to crush materials. When the machine works, driven by the electro motor, the rotor will rotate with high speed, and when the materials go into the action zone of the plate hammer, they will strike and are crushed on the plate of the rotor, and then are crushed again when they are thrown to the impacting device, and then the materials will bounce back from the impact lining board and go to the action zone of the plate hammer and are crushed again. This process will proceed repeatedly, and the materials go into the first, second and third impacting chamber to be crushed until they are crushed to the required granularity, and then discharged from the discharging mouth. Adjusting the gap between the impacting rack and the rotor can change the discharging granularity and the shape of the materials.

CI SERIES IMPACT CRUSHER

CI系列反击式破碎机

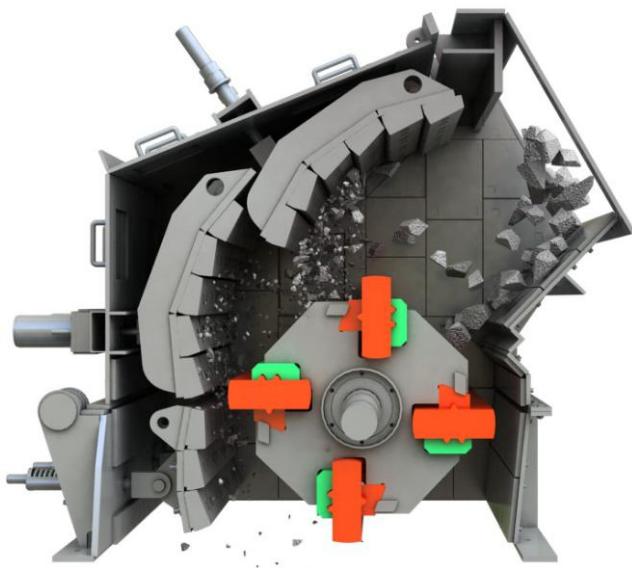

CI系列新型反击式破碎机综合当前国内国际优秀反击式破碎机技术，针对不同应用对转子和破碎腔型精细化设计，大量采用新型高耐磨材料，设备性能和处理量大幅度提高。适合用于中等硬度低磨蚀性的采石和砾石、水泥、混凝土和沥青回收利用、矿渣回收利用等行业。

The CI series new impact crusher integrates the current domestic and international excellent impact crusher technology. Fine design of the rotor and crushing cavity type for different applications, extensive use of new high wear-resistant material, equipment performance and processing capacity is greatly improved. It is suitable for industries such as quarrying and gravel with medium hardness and low abrasiveness, recycling of cement, concrete and asphalt, slag recycling and other industries.

突出优势

- 1、精细化设计的转子和腔型、转速和功率合理匹配，满足粗碎、中细碎和物料回收不同应用选择；
- 2、坚固的重型转子结构，提高了设备处理量和破碎比；高质量的焊接结构确保机器能承受最大冲击并获得良好的破碎效果；
- 3、船型板锤，牢靠的锁紧结构，具有良好的抗冲击、抗磨损性能并保持排料粒度稳定。
- 4、新型高耐磨材料大量使用，降低磨损件磨耗，延长更换周期，节约成本；
- 5、液压开盖和反击板与板锤间隙液压辅助调节，减轻劳动强度，缩短停机时间；
- 6、设备配有多种安全锁止装置，提高安全性能的同时并减小劳动强度；
- 7、可选装第三反击架，使产品粒形更完美。

1. The precise design of the rotor and cavity type, speed and power are reasonably matched to meet the different applications of coarse crushing, medium and fine crushing and material recovery;
2. The sturdy heavy-duty rotor structure improves the equipment handling capacity and crushing ratio; the high-quality welding structure ensures that the machine can withstand the maximum impact and obtain a good crushing effect;
3. The ship plate hammer, firm locking structure, has a good impact resistance, anti-wear properties and maintain a stable discharge particle size.
4. A large number of new high wear-resistant materials are used to reduce wear of wear parts, extend the replacement cycle, and save costs;
5. Hydraulic opening and counter-attack plate and hammer clearance hydraulic auxiliary adjustment, reduce labor intensity and shorten downtime;
6. The device is equipped with a variety of safety locking devices to improve safety performance and reduce labor intensity;
7. Optional third counter-attack rack, making the product more perfect grain shape.

JAW CRUSHER 鄂式破碎机

鄂式破碎机是出现较早的破碎设备，因其构造简单、坚固、工作可靠、维护和检修容易以及生产和建设费用比较少，因此，直到现在仍然广泛地在冶金、化工、建材、电力、交通等工业部门，用于破碎抗压强度在147~245MPa的各种矿石和岩石的粗、中、细碎。近年来，我厂为满足冶金、矿山、建筑等工业部门破碎高强度、高硬度的微碳铬铁的需要，专门研制了强力鄂式破碎机。

Jaw crusher is a crushing machine that is researched and developed very early. With simple and solid structure, reliable work, easy maintenance and repair and low production and construction fees, it has long been widely used for the coarse, medium and fine crushing of various kinds of ores and rocks whose compression strength is 147~245MPa in many industrial departments such as metallurgy, chemistry, building material, power plant and transportation.

工作原理 working principle

该系列破碎机工作方式为曲动挤压型，其工作原理是：电动机驱动皮带和皮带轮，通过偏心轴使动颚上下运动，当动颚上升时肘板与动颚间夹角变大，从而推动动颚板向固定颚板接近，与其同时物料被压碎或劈碎，达到破碎的目的；当动颚下行时，肘板与动颚夹角变小，动颚板在拉杆，弹簧的作用下，离开固定颚板，此时已破碎物料从破碎腔下口排出。随着电动机连续转动而破碎机动颚做周期运动压碎和排泄物料，实现批量生产。

The working manner of this series crushing machine is dynamic extrusion type, and its working principle goes like this: the electro motor drives the belt and belt wheel to make the movable jaw to move up and down through the eccentric shaft, and then movable jaw goes up, the angle between the toggle plate and the movable jaw is bigger, thus pushing the movable jaw to get close to the fixed jaw, and at the same time, the materials are crushed or smashed, thus reaching the goal of crushing; when the movable jaw goes down, the angle between the toggle plate and the movable jaw is smaller, under the effect of the draw bar and the spring, the movable jaw moves always from the fixed jaw, and then the crushed materials will be discharged out from the lower mouth of the crushing chamber. With the continuous rotation of the electro motor, the movable jaw of the crusher will do periodic motion to crush and discharge the materials, thus realizing mass production.

突出优势 highlight advantages

选用最高端的制作材料，独特颚头结构，密封保证，延长轴承寿命。

破碎腔深而且无死区，提高了进料能力与产量，其破碎比大，产品粒度均匀。

采用有限元分析技术，破碎机具有更高的强度。此机装有较其它同样规格破碎机更大更耐用的偏心轴轴承，其更高的承载能力和有效的迷宫密封使轴承使用寿命大大地延长。独特飞轮设计，有效减少震动，机器运转更平稳。

Select the most high-end production materials, unique boring head structure, seal guarantee, extend bearing life.

The crushing cavity is deep and has no dead zone, which improves the feeding capacity and the output. The crushing ratio is large and the product size is uniform.

Using finite element analysis technology, the crusher has higher strength. This machine is equipped with a larger and more durable eccentric shaft bearing than other crushers of the same size. Its higher load carrying capacity and effective labyrinth seal greatly extend the service life of the bearing. The unique flywheel design effectively reduces vibration and the machine runs more smoothly.

CJ SERIES OF EURO JAW CRUSHER

CJ系列欧版颚式破碎机

CJ系列颚式破碎机是河南红星矿山机器有限公司根据客户市场需求，引进开发的一款具有优异性能的颚式破碎机。与传统颚式破碎机不同，在破碎机运动参数、结构形式、调节方式等方面都有重大改进。

CJ系列颚式破碎机占用空间小、破碎比更大、运行更平稳，在运输安装、维护调整等方面更加具有优势。特别适合用于固定破碎生产线和移动破碎站。

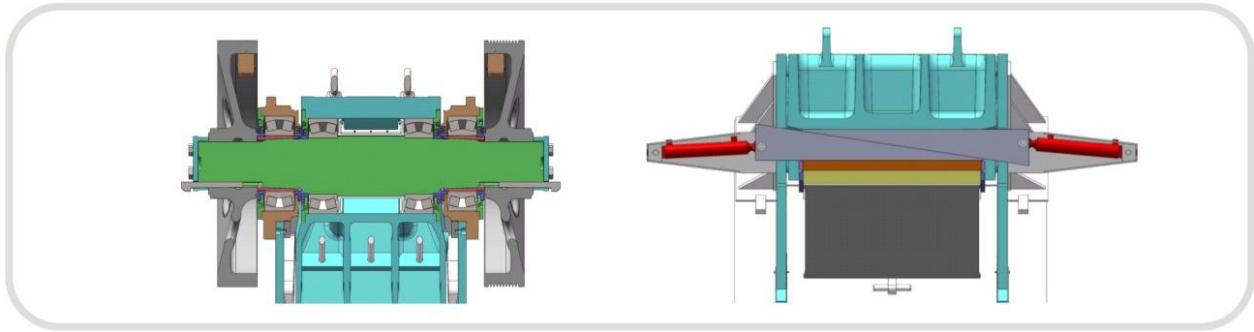

The CJ series jaw crusher is a jaw crusher with excellent performance introduced by Henan Hongxing Mining Machinery Co., Ltd. based on the needs of customers. Different from the traditional jaw crusher, there are significant improvements in the crusher's motion parameters, structural forms, and adjustment methods. The CJ series jaw crusher has less occupied space, larger crushing ratio and more stable operation. It has more advantages in transportation, installation, maintenance and adjustment. Particularly suitable for fixed crushing lines and mobile crushing plants.

工作原理 working principle

该系列破碎机工作方式为曲动挤压型，其工作原理是：电动机驱动皮带和皮带轮，通过偏心轴使动颚上下运动，当动颚上升时肘板与动颚间夹角变大，从而推动动颚板向固定颚板接近，与其同时物料被压碎或劈碎，达到破碎的目的；当动颚下行时，肘板与动颚夹角变小，动颚板在拉杆，弹簧的作用下，离开固定颚板，此时已破碎物料从破碎腔下口排出。随着电动机连续转动而破碎机动颚做周期运动压碎和排泄物料，实现批量生产。

The working manner of this series crushing machine is dynamic extrusion type, and its working principle goes like this: the electro motor drives the belt and belt wheel to make the movable jaw to move up and down through the eccentric shaft, and then movable jaw goes up, the angle between the toggle plate and the movable jaw is bigger, thus pushing the movable jaw to get close to the fixed jaw, and at the same time, the materials are crushed or smashed, thus reaching the goal of crushing; when the movable jaw goes down, the angle between the toggle plate and the movable jaw is smaller, under the effect of the draw bar and the spring, the movable jaw moves always from the fixed jaw, and then the crushed materials will be discharged out from the lower mouth of the crushing chamber. With the continuous rotation of the electro motor, the movable jaw of the crusher will do periodic motion to crush and discharge the materials, thus realizing mass production.

突出优势 highlight advantages

非焊接可拆解机架:机架侧板和前墙板、后横梁之间采用圆柱销连接，螺栓紧固，克服了焊接机架容易产生应力集中的不足，更加坚固可靠。可拆解结构便于运输和安装，尤其是井下安装运输更为便捷。

优化运动参数:优异的运动参数，使破碎机物料在破碎腔上部即可开始破碎，在破碎腔下部冲程更大，破碎比更大。

超大轴承设计:与以往同规格颚式破碎机相比，轴承规格增大，延长使用寿命；动颚和机架4个轴承规格相同，减少了备件种类。

楔块式排料口调节方式:排料口调节与传统插板式调整方法不同，采用楔块调整排料口，减小了工人劳动强度和停机时间。用户可以根据需要选装液压调整排料口装置，调整更为容易。

钢板肘板:肘板采用高强度钢板材料，破碎机过载时弯曲变形，保护破碎机关键件不受损坏。与传统铸铁肘板相比重量轻，更换容易；避免铸铁肘板折断落下，损坏输送机。

一体化电机座结构,整体钢架底座:电机座和主机一体化结构，使安装更加简便，节约占用空间,整机安放于钢架底座之上，主机与底座间通过减震垫连接，对基础影响小。

Non-welded detachable frame: The connection between the side plate of the frame, the front wall plate and the rear beam is connected by a cylindrical pin and the bolts are fastened, which overcomes the inconvenience that the welding rack is prone to stress concentration and is more solid and reliable. Detachable structure is convenient for transportation and installation, especially for underground installation.

Optimize motion parameters: With excellent motion parameters, the crusher material can be broken in the upper part of the crusher chamber, larger stroke and greater crushing ratio in the lower part of the crusher chamber.

Super-large bearing design: Compared with the previous jaw crusher of the same specification, the bearing size is enlarged and the service life is prolonged. The 4 bearing sizes of the movable jaw and the frame are the same, which reduces the types of spare parts.

Wedge type discharge port adjustment method: The discharge port adjustment is different from the traditional plug-in type adjustment method, using wedges to adjust the discharge port, reducing the labor intensity of workers and downtime. The user can optionally install the hydraulic adjustment discharge port device to make adjustment easier.

Steel plate elbow: The elbow plate adopts high-strength steel plate material, and the crusher is bent and deformed when overloaded to protect the crusher key parts from damage. Compared with the traditional cast iron brackets, it is lighter in weight and easy to replace; it prevents cast iron brackets from falling and damaging the conveyor.

Integrated motor base structure, integrated steel frame base: The integrated structure of the motor base and the host machine makes installation easier and saves space. The whole machine is placed on the base of the steel frame, and the main machine and the base are connected through a shock-absorbing pad, which has little influence on the foundation.

HVI IMPACT SAND MAKER

HVI冲击式制砂机

HVI系列冲击式制砂机是我公司引进德国技术，吸取国内外同类产品的先进技术开发的具有国际水平，同时拥有多项自发研发特点的新一代产品，集各种破碎模式于一体，成为机制砂行业的核心设备。可广泛应用于金属和非金属矿石、建筑材料、人工制砂以及各种冶金矿渣的破碎与整形。

The HVI series sand maker is a new generation of products that our company introduces German technology, absorbs the domestic and foreign similar products' advanced technology development, and has many spontaneous R & D characteristics at the same time, which integrates all kinds of crushing modes, become the core equipment of mechanism sand industry. Can be widely used in metal and non-metallic ore, building materials, artificial sand and various metallurgical slag crushing and shaping.

Any Change of the technical data shall not be advised additionally,please make the weight and the dimensions of the object as the standard.

突出优势 highlight advantages

- 1、深腔叶轮，通过量提高30%。
- 2、周护板上下可掉头，延长使用寿命。
- 3、组合式抛料头，只需更换磨损部分，可降低使用成本30%。
- 4、中心与周边进料，灵活调节，方便转换。
- 5、可选择润滑方式，轴承室稀油型和油脂型模块化设计，可实现整体互换。

1. Deep cavity impeller, throughput increased by 30%.
- 2.The ambient guard plate can be turned up and down to prolong the service life.
- 3.Combined throwing head, only need to replace the wear part, can reduce the cost of 30%.
- 4.Center and peripheral feed, flexible adjustment, convenient conversion.
- 5.Lubrication method can be selected,the modular design of thin oil type and grease type of bearing chamber can realize the whole interchangeability.

采用最佳的破碎腔物料撞击角度设计，易损件不易磨损消耗，直接降低了生产设备的使用成本。

人性化的设备，使得设备维护简单，方便使用。该设备属于一种在机制砂行业中用途比较广泛的新型设备，可以很有效的把大理石、河卵石、钾长石、铁矿石等石料制成不同粒度的小石子和砂料，出产成品粒度均匀、品质好。

By adopting the best impact angle design of the crushing cavity material, the wearing parts are not easy to wear and consume, which directly reduces the use cost of the production equipment.

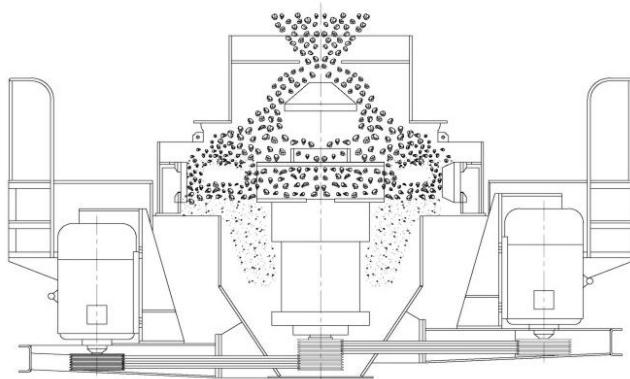

Humanized equipment makes the equipment easy to maintain and convenient to use. The equipment belongs to a new type of equipment that is widely used in the machine-made sand industry. It can effectively make marble, river pebbles, potash feldspar, iron ore and other stones into different sizes of uniform and good quality small stones and sand materials .

VSI SAND MAKER

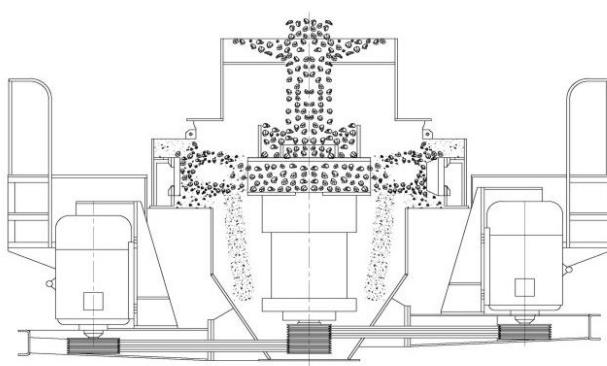

VSI制砂机

VSI系列高效立轴冲击式破碎机（新型制砂机）是我公司引进德国先进技术的基础上，结合国内制砂生产方面的实际情况，经历数次技术改进之后研制出的具有国内、国际领先水平的高效制砂设备。该设备尤其适宜为高层建筑、高速公路（铁路）建设、市政工程、大型水利设施、混凝土搅拌站等诸多领域提供优质砂石骨料。

HXVSI series high efficiency vertical shaft impact crusher(sand maker)is the stone crushing equipmentwith domestic and international advanced technologies,which is researched on the basis ofGermany advanced technology,combining the actual demand ofChina sand—making industry.It can supply high quality sand aggregate for high building,expressway(railway)construction,municipal engineering,large scale irrigation establishment,concrete batching plant and many other areas.

中心进料伴随瀑落料

完全中心进料

工作原理 working principle

VSI制砂机运用先进的选择性破碎和解理破碎原理，直接对物料施加足够动能，并通过冲击将动能转换成克服物料所需的破碎能而破碎。物料基本沿其自然的纹理面、解理面断裂，粒形好、自身消耗低。该机能够实现“石打石”和“石打铁”两种工作原理的转换。

VSI sand maker uses the advanced selective crushing and cleavage breaking principle to apply enough kinetic energy to the material, and break the kinetic energy into the broken energy needed to overcome the material through the impact. The material is fractured along its natural texture surface and cleavage surface, with good grain shape and low self-consumption. The machine can realize the transformation of two working principles of "stone against stone" and "stone against iron".

VERTICAL SHAFT IMPACT CRUSHER

直通冲击式制砂机

HX系列直通冲击式破碎机又称制砂机，是我公司引进美国巴马克公司著名的“石打石”破碎机原理及技术，结合国内制砂生产方面的实际情况，研制开发出具有较高专业水平的高效碎石设备。它广泛适用于各种岩石、磨料、耐火材料、水泥熟料、石英石、铁矿石、混凝土骨料等多种硬、脆物料的中碎、细碎（制砂粒）。对建筑用砂、筑路用砂。

HX series vertical shaft impact crusher is a high efficient rock crushing equipment with home and international leading level;the machine is developed by introducing the crushing theory and technology from Barmag Company of America and combining the actual situation of sand making.It is widely used for crushing of hard and brittle materials,such as rock,grinding material,refractory material,cement clinker,quartzite,iron ore and concrete aggregate;and it is especially suitable for the sand and aggregate making for construction and road paving.

Working principle:Material falls into the fast rotating impellers from the top of machine and crushes with the material distributed around the impeller under the effect of centrifugal force.After the impact with each other,the material is crushed between impeller and cabinet and then discharged from the bottom.It can cycle many times with the close circuit and the screening device will control the granularity of finished products.

突出优势 highlight advantages

设备体积小、操作简便、安装和维修方便。

具有整形功能、产品呈立方状、堆积密度大。

涡流腔内部气流自循环，粉尘少，噪声小。生产过程中，石料能形成保护底层，机身无磨损，经久耐用。

少量易损件用特硬耐磨材质制成，体积小、重量轻、便于更换配件石尤为适宜。

Small size equipment,easy to operate,convenient to install and maintain
With function of size-shaping;cubic products;big bulk density.

There is airflow self-circulation inside vortex chamber;less dust;Low noise;Stones can form the bottom protection base during production process;No machine body abrasion,long durable in use.

A few quick-wear parts are made of ultra hard and wear-resisting materials with small size and light weight,so to make it easily replace the parts.

工作原理 working principle

物料由进料斗进入破碎机，经分料器将物料分成两部分，一部分由分料器中间进入高速旋转的叶轮中，在叶轮内被迅速加速，其加速度可达数百倍重力加速度，然后以60-70米/秒的速度从叶轮三个均布的流道内抛射出去，首先同由分料器四周自收落下的一部分物料冲击破碎，然后一起冲击到涡支腔内物料衬层上，被物料衬层反弹，斜向上冲击到涡动腔的顶部，又改变其运动方向，偏转向下运动，从叶轮流道发射出来的物料形成连续的物料幕。这样一块物料在涡动破碎腔内受到两次以至多次机率撞击、磨擦和研磨破碎作用。被破碎的物料由下部排料口排出，和循环筛分系统形成闭路，一般循环三次即可将物料破碎成20目以下。

在整个破碎过程中，物料相互自行冲击破碎，不与金属元件直接接触，而是与物料衬层发生冲击、磨擦而粉碎，这就减少了角污染，延长机械磨损时间。涡动腔内部巧妙的气流自循环，消除了粉尘污染。

The materials go into the crusher from the feed hopper and are separated into two parts by the distributor. One part goes into the impeller rotating with high speed from the middle of the distributor, and is quickened inside the impeller, and the acceleration can reach hundred times of the acceleration of gravity, and then the materials will cast from the three uniformly distributed runners of the impeller at a speed of 60-70m/s, and impact and crush with the other part of materials which fall from around the distributor and then they will together impact to the material lining inside the vortex cavity. Bounced from the material lining, the materials will impact obliquely upward to the top of the whirling motion chamber which will change their movement direction again, so that materials will move down, and the materials launching from the runners of the impeller will form a continuous material curtain. In this way, the materials will get two times or more hitting, friction, grinding and crushing effect inside the whirling motion crushing chamber. The crushed materials will be discharged from the bottom discharging mouth. This process will form a closed-circuit system together with the cyclic screening system and generally speaking, after three times of cycle, the materials will be crushed below 20Moh. During the entire crushing process, the materials are mutually impact-crushed and do not directly contact with the metal components, but collide with the material linings to impact, rub and crush, which reduces the angle pollution and prolongs the mechanical wear time. The natural circulation of air in the vortex chamber eliminates dust pollution.

HX SERIES MOBILE CRUSHING PLANT

HX系列履带式移动破碎站

主要性能特点

履带式液压驱动破碎站是我公司引进国际知名矿山机器公司技术，并结合国内实际情况，研发出的移动破碎筛分设备。该机采用液压系统驱动履带，从而实现平稳行走，并能够适应多种复杂的作业现场条件。它广泛适用于矿产开采、石料开采、高速公路（铁路）和桥梁建设、城市建筑垃圾处理等诸多领域。

- 1、底盘采用全钢船型结构，强度高，对作业场地适应性更强。
- 2、大功率行走电机，马力强劲，安全可靠。
- 3、采用知名品牌电机，实现动力系统的优良性能，具有低噪、节能等特点。
- 4、可根据客户的要求配给各级别破碎筛分设备，整机优化设计，充分保证品质。
- 5、可配备发电机组，以满足无电或断电等复杂情况的正常作业要求，保证连续作业，减少损失。

FEATURES

Crawler-type hydraulic drive crushing station is a crushing and screening equipment. It is developed by introducing the technology from world famous mining company and combining the Chinese actual situation. It adopts the hydraulic system driving crawler to make it run smoothly, it can also adapt to various complex operating conditions. This machine is widely used in mineral mining, stone mining, highway (railway) and bridge construction, waste treatment for urban construction and other fields.

- 1、The chassis adopts steel ship structure with high strength and it is highly adaptable to different working sites.
- 2、The high-power walking motor is powerful, safe and reliable.
- 3、The well-known brand motor achieves the good performance of power system, with features of low noise and energy saving, etc.
- 4、According to different requirements of customers, we can provide the different crushing and screening equipments and combined type optimum design, and we fully guarantee the quality.
- 5、The generator set can be equipped, in order to work normally under complex situations, such as the situation of no power or sudden power off, ensuring continuous operation and reducing unnecessary loss.

MORE COOPERATION BUSINESS UNIT

多机组合作业

根据客户的不同要求以及各种作业现场条件，我们可以针对性的提供整套解决方案，对各种破碎、筛分及输送进行组合式优化设计，达到最佳组合配置，以充分满足客户的要求。

According to the different requirements of customers and various conditions of operation site, We can provide a complete set of solutions, providing combined type optimum design for crushing, screening and transportation, to achieve the best combined configuration, meeting the demand of customers.

YK SERIES VIBRATING SCREEN

YK系列振动筛

本系列振动筛做圆形运动，是为采石场筛分料石设计的，也可供选煤矿、选矿、建材、电力及化工部门等作产品分级用，YK系列为国内新型机种，该机采用偏心激振器及轮胎联轴器，具有结构先进，激振力强，振动噪音小，易于维修，坚固耐用等特点。

YK series vibrating screen moves on a circular motion. It is a multi-layer and high efficient vibrating screen. Advantages are: stable structure, strong exciting force, high efficiency, low noise pollution, easy to maintain and durability; circular vibrating screen has been widely used in mine, construction, transportation, energy and chemical industries.

工作原理 working principle

圆振动筛主要由筛箱、激振器、悬挂（或支撑）装置及电动机等组成。电动机经三角皮带，带动激振器主轴回转，由于激振器上不平衡重物的离心惯性力作用，使筛箱获振动。改变激振器偏心轴，可获得不同振幅。

The circular vibrating screen mainly consist of a sieve box, a vibrator, a suspension (or a support) device and an electric motor. With V-belt driving, the motor drive exciter to rotate. Because of the centrifugal inertia force of the imbalance heavy weight on the exciter, the sieve box is vibrated. Changing the eccentric shaft of the exciter can obtain different amplitudes.

突出优势 highlight advantages

筛分、生产效率高: 由于筛箱振动强烈,减少了物料堵塞筛孔的现象,使筛子具有较高的筛分效率和生产率。

构造简单、节能: 由于构造简单,拆换筛面方便;筛分每吨物料所消耗的电能也少。

High efficiency of screening and production: because of the strong vibration of the sieve box, so the phenomenon of material blocking screen is reduced, which improve the efficiency of screening and production.

Simple structure, saving energy: because of Simple structure, it is easy to replace sieve; it also consume less electricity for screening per ton of material.

HX SERIED HEAVY VIBATING SCREEN

HX系列振动筛

稀油自润滑，3-6个月更换一次润滑油。

Lubrication by thin oil, replace the lubricant in 3-6 months.

HX系列振动筛，是红星机器在YA、YK系列振动筛基础上，综合客户现场使用情况及维护经验，针对重型工况升级改进的一款新型圆周振动筛产品。

HX series vibrating screen is red star machine based on YA, YK series vibrating screen, integrated customer site usage and maintenance experience, in view of the heavy working condition of a new type of circular vibrating screen product upgrade improvement.

VIBATING FEEDER

振动给料机

本公司生产的给料机系直线振动式给料机，具有振动平稳、工作可靠、寿命长等特点，可为破碎机械连续、均匀的喂料，并对物料进行筛分，广泛用于选矿、建材、硅酸盐和化学工业中的破碎、筛分联合设备中。

YK series vibrating screen moves on a circular motion. It is a multi-layer and high efficient vibrating screen. Advantages are: stable structure, strong exciting force, high efficiency, low noise pollution, easy to maintain and durability; circular vibrating screen has been widely used in mine, construction, transportation, energy and chemical industries. Vibrating feeder made by our company is liner vibrating feeder; the advantages are: smooth vibration, reliable operation and long service life. It can realize continuous and even material feeding for crushers in sandstone production line and make rough screening for materials. Widely applied in combined operation of crushing and screening in the industries like metallurgy, mine, ore dressing, building materials, chemicals, etc.

HSF SERIES HEAVY-DUTY RODS VIBRATING FEEDER

HSF系列棒条振动给料机

HSF系列棒条振动给料机是按照重型工况设计，适用于石料、建材和冶金矿山向大中型初级破碎设备给料。

最大给料粒度1500mm，最大给料量1500吨/小时。

HF series bar vibrating feeder is designed according to heavy duty condition, which is suitable for feeding to crushing equipment of large and medium to primary crushing in stone materials, building materials and metallurgical mines.

Max.feeding size 1500 mm Max feeding capacity 1500 t/t

突出优势 highlight advantages

- 1、按照重型工况设计的槽体，抗冲击能力强。
- 2、双轴轴承采用独立润滑油箱，结合销轴式弹簧支座，适合不同安装角度。
- 3、模块化设计，易损件各型号间可以通用互换。
- 4、棒条缝隙可调节，两段棒条之间有落差，物料分布更均匀。
- 5、可以选配第二层分选筛，对弃料、泥土精细筛分，提高原料利用率。

The tank designed according to the heavy duty condition has strong impact resistance.

The biaxial bearing adopts independent lubricating oil box, combining pin type spring bearing, which is suitable for different installation angles. Modular design,which can be exchanged among various models of wearing parts.

The gap between bars can be adjusted, because there is a gap between the two bars, so the material distribution is more even.

The second layer sorting screen can be selected to improve the utilization rate of raw materials.

TERTIARY IMPACT CRUSHER

高效细碎机

该机械用途广泛，其性能已达到国际领先水平，是目前最行之有效，实用可靠的碎石机器，特别适用于制作磨料，耐火材料，水泥、石英砂、钢砂等多种硬、脆物料的细碎与中碎，是一种高效，节能的碎石制砂设备，比传统细碎机节能50%，是目前世界上最先进的细碎机设备。

The machinery widely used, its performance has reached international lead level, is currently the most effective practical reliable gravel machine, especially suitable for producing abrasive, refractory material, cement, quartz sand, steel grit finely with a variety of hard and brittle materials such as crusher, is a highly efficient, energy-saving gravel sand making equipment, which can save 50% energy than the traditional fine crusher, is currently most advanced fine crusher equipment in the word.

SINGLE-STAGEHAMMER CRUSHER

单段破碎机

本系列单段破碎机引进德国先进技术，经过优化设计和结构改进，设计制造的新一代高效破碎机。经过历年的使用和改进，已发展至较为成熟的第四代产品。该单段破碎机能将矿山采来的大块矿石一次破碎到平均5mm的粒度，是传统的两段、三段破碎方式的理想换代产品，简化工艺流程、节约基建投资和生产费用。

This single-stage crusher can crush the mined large-sized ores to the granularity of an average of 5mm for only one time, and it is the ideal product for replacing traditional two-stage and three-stage crushing method, thus simplifying the production process and saving infrastructure investment and production cost.

突出优势 highlight advantages

工艺升级，运行成本低: 工艺简化，原二级或三级破碎可减少为一段；系统配套功率小，生产成本大大降低。

粒度可调，破碎比大: 出料粒度3-150mm范围可调整；碎碎比大，最大进料粒度可达1.3-1.5m。

粒型优异，出料细: 出料细，加工骨料粒形好，粉状料≤20%。

Process upgrade, low operating cost, process simplification, primary secondary or tertiary crushing can be reduced to one section ; the system form a complete set of power is small, which can reduce production cost greatly .

Adjustable granularity, large crushing ratio: discharge size can be adjusted within 3-150 mm; large crushing ratio, max feeding size can reach 1.3-1.5 mm. excellent grain shape, fine finished size. The aggregate is cubic shape and powder percentage will be less than 20%.

PROCESS FLOW OF ARTIFICIAL SAND PRODUCTION

机制砂生产工艺流程

工艺特点

- 1、产品粒型呈立方体状，质量优异，针、片状产品含量低，抗压能力强，适用于高标准建设需要，如水利、桥梁、高等级公路以及高层建筑行业。
- 2、适用于花岗岩、玄武岩、河卵石、铝矾土、水泥熟料、石英石、金刚砂、矿砂、铁矿石等原料破碎，克服传统制砂设备只适用于软岩、150Mpa以下材料的特点。
- 3、公司资深工程师为每一位客户量身定制，科学选配设备，不返工。保证为客户选配的设备3-5年不落后。
- 4、含泥量与含粉量可控制。

1. Cubic shape of final product with excellent quality;the needle and slice shaped product is minimum;the high compression strength is suitable for high standard construction such as water conservancy,bridge,highway and high-rise buildings.
2. Unlike traditional sand making equipment only restrict in soft rock with compression strength less than 150MPA,this equipment is suitable for grinding of granite,basalt,bank gravel,bauxite,cement clinker,quartz,silicon carbide,ore sand and iron ore;
3. Our company's senior engineers can make the machine by customers requirements and choose the equipment scientifically with out rework.The machines will not back ward within three to five years.
4. The content of mud and powder can be controlled.

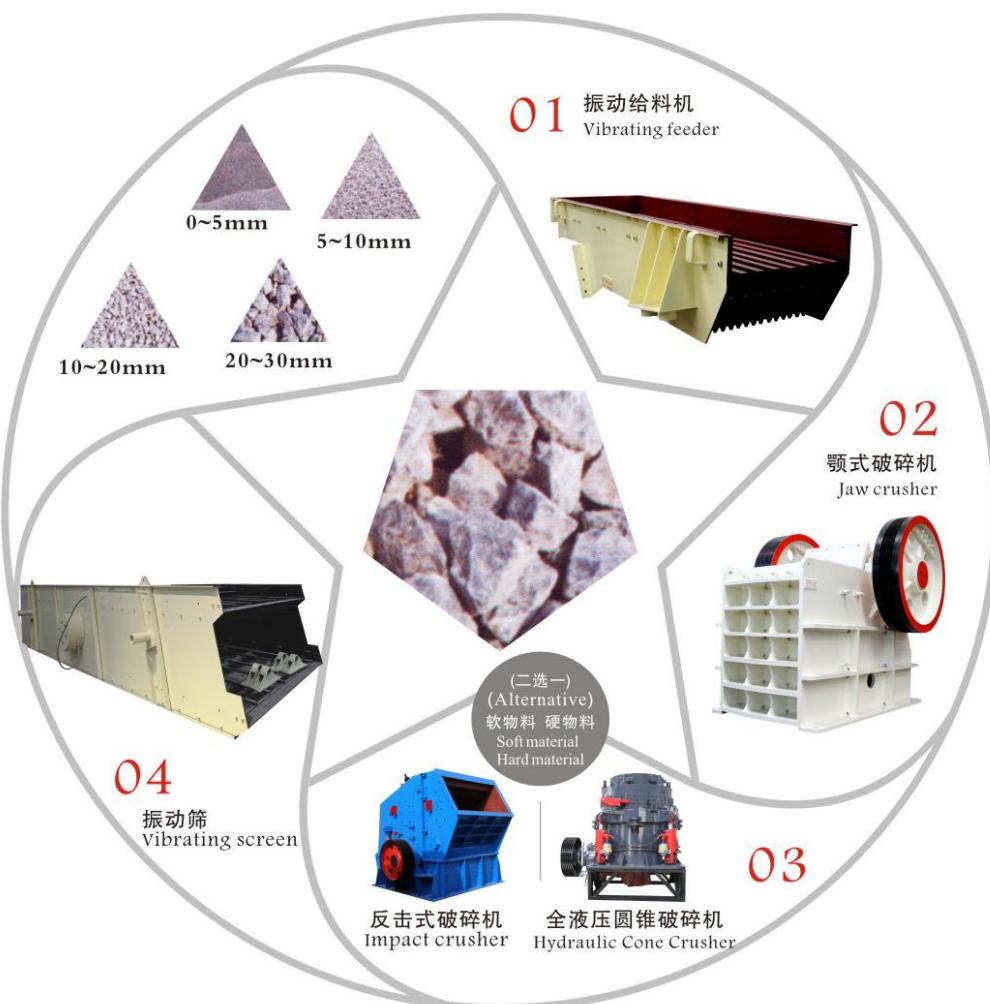

PROCESS FLOW OF STONE PRODUCTION LINE

石料生产线工艺流程

工艺特点

- 1、石料破碎生产线自动化程度高、破碎比大、生产效率高、处理量大，经过破碎的产品呈立方体状，针、片状含量低，无内裂缝，抗压强度高。
- 2、设备维护保养简便，易损件采用目前国内最新高强耐磨材料，损耗小、使用寿命长，能为客户带来可观的经济效益。
- 3、我公司设计的石料破碎生产线，成功应用于石灰石、玄武岩、花岗岩、河卵石等岩石的破碎加工，破碎后的成品质量完全达到GB14685—2001标准，为高等级公路、铁路、水利、混凝土搅拌站等行业提供了合格骨料。

1. Process flow of stone production line carries the following characteristics: highly automatic, high compression ratio, high efficiency, large processing quantity, cubic shape of finished product with minimum needle and slice shaped product, high compression strength without inner crack.
2. Easy to maintain and repair; wearing parts are made from abrasion resistance material with domestic advanced high level with low in abrasion and long in using life. Considerable economic profit can be brought by doing this.
3. Stone crushing production lines designed by our company are successfully applied in limestone, basalt, granite and pebble; the finished product reaches the standard of Gb14685—2001, which is the best aggregate for highway, railway, water conservancy and concrete mixing station.

HGM GERMAN HIGH EFFICIENCY MILL

HGM 德版高效超细磨粉机

HGM高压细粉磨是我公司科研所在20多年从事磨粉设备研发经验的基础上，根据多年来用户使用磨粉设备的实际情况，针对磨粉行业发展的需要，吸收国内外最新粉磨技术及理念，潜心开发出的具有国际领先技术水平的新型产品。该机适用于加工莫氏硬度9.3级以下，湿度在7%以下的各种非易燃易爆矿产物料的加工，是加工石英、长石、方解石、石灰石、滑石、陶瓷、大理石、花岗岩、白云石、铝矾土、铁矿石、重晶石、膨润土、煤矸石、煤等物料的理想选择，物料的成品细度可在0.18毫米（80目）~0.015毫米（800目）之间任意调整。

HGM German high efficiency super fine powder grinding mill is one new type product with the international advanced technological level developed by our company and German experts by absorbing the domestic and overseas excellent technology and concept on the basis of the basis of the actual situation of customers and the experience of our researchers in the past 20 years. This machine can be used to process all kinds of non-flammable and non-explosive mineral materials with the Mohs hardness below 9.3 and temperature below 7%. Which is the perfect choice for the materials such as quartz, feldspar, calcite, limestone, talc, ceramics, marble, granite, dolomite, bauxite, iron ore, bentonite, coal and so on. and the fineness of finished products can be adjusted between 0.18mm~0.010mm (80 mesh~1250 mesh) and the particle size of part materials can reach 2000 meshes at the maximum.

突出优势 highlight advantages

- 适用范围广** 选粉机模块化设计，适应不同细度需求。
- 精细分级** 选粉机变频调速，产品精细分级。
- 易维护** 新型密封结构，加油维护周期长，更节能。
- 脉冲除尘** 脉冲除尘，可实现自动清灰。
- 高产高效** 弹簧增压装置，加大研磨力，高产高效。

Suitable for large range modular design of power concentrator can meet needs of different fineness
 Fine diversity frequency control of powder concentrator, product fine diversity
 Easy to maintain new sealing structure the cycle of adding oil and maintenance is long more saving energy
 Pulse dust removal it can realize automatic ash removal
 High production high efficiency spring booster increase the grinding force High production high efficiency

HIGH STRENGTH PULVERIZER

高强磨粉机

高强磨适用于粉碎重晶石、石灰石、陶瓷、矿渣等莫氏硬度不大于9.3级，湿度在6%以下的非易燃易爆的矿山、冶金、化工，建材等行业280多种物料的高细制粉加工，成品粒度在80—425目范围调节（最细1000目）。通过机内增加的特殊装置，可生产出30—80目的粗粉。

R-type Raymond pulverizer is used for the highly fine power processing of 280 kinds of non-flammable and non-explosive materials in mine, chemical industry and building materials etc and the materials have the Moh's hardness scale less than 9.3 level and the humidity of less than 6% and include barite, calcite, potash feldspar, pencil stone, marble, lime stone, dolomite, fluorite, lime, active carclazite, actcarbon, bentonite, kaoline, cement, phosphorite rock, gypsum, glass and heat insulating materials etc, the particle size of finished product can be adjusted from 80—325 meshes at random. This series, our patent product, is used in grinding the non-inflammable and non-explosive stuff with Moh's hardness below 9.3 and humidity less than 6%, such as barite, limestone, ceramics, clay, etc. Fineness of final product can be adjusted between 80 and 425 meshes and final being equipped particular parts, the machine can produce coarse powders ranging from 30 to 80 meshes.

BUCKET ELEVATOR

斗式提升机

提升设备是我公司的主导产品之一，提升设备根据物料特性和使用环境的不同分为胶带斗式提升机，环链斗式提升机，板链斗式提升机和钢丝绳芯胶带斗式提升机。斗式提升机适用于垂直输送粉状，粒状及小块状的物料，它具有结构简单，运行平稳，提升高度高和使用寿命长等特点，广泛地应用于建材、化工、煤炭、电力、港口等行业的物料运输系统中。

Lifting equipment is one of the leading products of our company. According to the material characteristics and the use of the environment, the lifting equipment is divided into the belt bucket elevator, the chain bucket elevator—the plate chain bucket elevator and the wire rope core belt bucket elevator. Bucket elevator is suitable for vertical transport of powdery, granular and small pieces of material. It has the advantages of simple structure, stable operation, high degree of improvement and long service life, etc. It is widely used in building materials, chemicals, coal, electric power, port and other industries in the material transport system.

工作原理 working principle

料斗把物料从下面的储藏中舀起，随着输送带或链提升到顶部，绕过顶轮后向下翻转，斗式提升机将物料倾入接受槽内。带传动的斗式提升机的传动带一般采用橡胶带，装在下或上面的传动滚筒和上下面的改向滚筒上。链传动的斗式提升机一般装有两条平行的传动链，上或下面有一对传动链轮，下或上面是一对改向链轮。斗式提升机一般都装有机壳，以防止斗式提升机中粉尘飞扬。

The hopper picks up the materials from the storage below, and as the conveyor belt or chain is lifted to the top, it goes around the top wheel and turns downward, and the bucket elevator pushes the material into the receiving tank. The belt of bucket elevator is usually made up of rubber belt, which is mounted on up and down of driving drum and bend pulley of up and down. The chain drive bucket elevator is usually equipped with two parallel transmission chains, with a pair of drive sprockets on or below, or a pair of steering sprockets. The bucket elevator is usually equipped with casing to prevent dust flying in the bucket elevator.

RAYMOND PULVERIZER

球磨机

球磨机是物料被破碎之后，再进行粉碎的关键设备。球磨机广泛应用于水泥，硅酸盐制品，新型建筑材料、耐火材料、化肥、黑色与有色金属选矿以及玻璃陶瓷等生产行业，对各种矿石和其他可磨性物料进行干式或湿式粉磨。

Ball mill is the key milling equipment after material has been crushed. It is widely used in cement, silicate, new construction material, refractory material, chemical fertilizer, ferrous metal and non-ferrous metal as well as ceramics. It is widely applied to dry or wet grinding for ores and grindable materials.

工作原理 working principle

本机为卧式筒形旋转装置，外沿齿轮传动，两仓，格子型球磨机。物料由进料装置经入料中空轴螺旋均匀地进入磨机第一仓，该仓内有阶梯衬板或波纹衬板，内装不同规格钢球，筒体转动产生离心力将钢球带到一定高度后落下，对物料产生重击和研磨作用。物料在第一仓达到粗磨后，经单层隔仓板进入第二仓，该仓内镶有平衬板，内有钢球，将物料进一步研磨。粉状物通过卸料箅板排出，完成粉磨作业。

Ball mill is horizontal cylindrical rotation device, driving by brim gearwheel: one or two Chambers: model: grid mill and overflow mill. For Two chamber mill, the material goes into the first chamber through the feeding inlet. Inside the first chamber, there are stage liners and ripple liners as well as steel balls with various kinds. The shell rotates which generates eccentricity. This force brings ball to a certain height and then balls drop down by gravity. The impact is the grinding force to the material. After the primary grinding in the first chamber, material goes into the second chamber through segregate screen. In the second chamber, there are flat liners and steel section. After the secondary grinding, material is discharged through the discharging screen.

HIGH STRENGTH PULVERIZER

棒磨机

棒磨机有干式和湿式两种形式可供选择，用户可根据自己的实际情况加以选择。公司采用先进的可控进出料技术，结合实际的研磨物料应配用合适的研磨体，以传统的点接触改为线接触，使出料粒度更为均匀，产量更高，广泛使用于耐材、化工、冶金、玻璃等行业对磨后成品均匀度要求比较高的研磨作业，近年来还用于建筑用砂的制砂行业等。

Rod Mill has dry and wet two types to choose, user could choose depend on the fact. The company USES the advanced output controllable technology, with the fact milling material set the suitable miller, change the traditional point contact into line contact, make the output granularity evener, high product, widely used in chemical industry, metallurgy, glasses industry, and the high requirement of the evenness for milling after milling, sandmaking of building sand in recent years.

THREE-RINGS AND MEDIUM SPEED MICRO POWDER MILL

三环中速微粉磨

型三环中速微粉磨是我公司自行研制的新产品，是目前国内先进的干法非金属矿超细粉体的细磨设备。物料的粉碎与粉体的分级置于同一机体内而各自独立运转，具有结构紧凑、产品细度可调1400~3000目，维修简便、单位产品能耗低、投资省等特点。

物料的粉碎、分级至成品是在一密闭的系统中进行，含尘气体经除尘处理，不污染，是绿色环保的理想设备。本机适用于各种莫氏硬度5级以下脆性物料的超细粉碎，如重钙、重晶石、硅灰石、高岭土、稀土矿、赤铁矿、滑石、长石、炉渣等。

Three—rings and Medium—speed Micro Powder Grinder mill is a new product developed by our company, it is the domestic advanced drytypefine grinding equipmentfor non—metallic super—finer powder. The material's crushing and powder's classification are putted in one machine rather than run S alone. Advantages: compact structure, adjustable final fineness (from 400~3000 meshes), easy maintenance, low unit product consumption, low investment and so on. The material's crushing and product's classification are proceeded in one closed system, dusty air is handled by dust collector, so there is no pollution. It is the ideal environment protection equipment. This machine is suitable for super fine grinding for all kinds of fragile and non—flammable and non—explosive material whose Moh's hardness is below 5 grade, such as calcium carbonate, barite, aedoforsite, kaoline, rare earth ore, hematite, talcum, feldspar, slag and so on. Compared with traditional Raymond mill, it has advantages of fine product, low energyconsumption, is theideal equipment ofdry type calcium carbonate super fine powder grinding.

SF系列浮选机

工作原理 working principle

该浮选机由电动机三角带传动带动叶轮旋转，产生离心作用形成负压，一方面吸入充足的空气与矿浆混合，一方面搅拌矿浆与药物混合，同时细化泡沫，使矿物粘合泡沫之上，浮到矿浆面再形成矿化泡沫。调节闸板高度，控制液面，使有用泡沫被刮板刮出。

The flotation machine by the motor to drive triangle impeller rotate produces centrifugal effect to form the negative pressure, on the one hand, plenty of air inhaled mixes with pulp; on the one hand, mixing slurry mixed with drugs, refining the bubble; at the same time, make the mineral adhesive foam, float to the pulp surface to form the mineralized froth. Adjust the height of the gate and control the liquid level so that the useful foam can be scraped off.

BF FLOTATION MACHINE

BF系列浮选机

运行成本低:与常规机械搅拌式浮选机比较能节电1/3~1/2。

分选精度高,精煤灰分低:精煤灰分可比常规机械搅拌式浮选机降低1~2%。

浮选效果好:内装有液面自控和电控装置,泡沫细化程度高,从而提高了浮选的效果。

易损件耐用性强:叶轮在机内一直处于活动状态,起到在清除积料和杂物的作用,减少了因杂物而损坏部件的现象;且搅拌装置的叶轮由磨橡胶制成,增强了耐磨度。

Low operating cost: Compared with conventional mechanical stirring type flotation machine, it can save 1/3~1/2 of electricity. The accuracy of the separation is high, the cleaned ash is low: the cleaned coal ash can be reduced by 1~2%, compared with conventional mechanical stirring type flotation machine.

Vulnerable parts are durable: the impeller is always active in the machine, which plays a role in removing material deposit and debris, reducing the phenomenon of damaging parts due to clutter; the impeller of the agitator is made of grinding rubber, which enhances the wear resistance.

KYE FLOTATION MACHINE

KYE浮选机

该浮选机采用“U”型槽体、空心轴充气和悬挂定子，尤其是采用了一种新式叶轮。这是一种叶片后倾一个角度的锥形叶轮，类似于高比转速的离心泵轮，扬送矿浆量大、压头小、功耗低且结构简单。在叶轮腔中还装置了多孔圆筒形空气分配器，使空气能预先均匀地分散在叶轮叶片的大部分区域，提供了较大的矿浆—空气接触界面。

This type flotation machine is formed by U trough solid, hollow shaft inflation, suspension rotor and new type impeller. The cone impeller lean backwards, the blending quantity is big and the pressure head is small, the advantages are: simple structure and low energy consumption. Inside the impeller, there is air distributor, which distributes air into most parts of impeller evenly.

XCF FLOTATION MACHINE

XCF浮选机

在浮选机工作时，随着叶轮的旋转，槽内矿浆从四周经槽底由叶轮下端吸到叶轮叶片之间，同时，由鼓风机给入的低压空气经空心轴和叶轮的空气分配器，也进入其中。矿浆与空气在叶片之间充分混合后，从叶轮上半部周边向斜上推出，由定子稳流和定向后进入整个槽子中。气泡上升到泡沫稳定区，经过富集过程，泡沫从溢流堰自流溢出，进入泡沫槽，还有一部分矿浆向叶轮下部流去，再经叶轮搅拌，重新混合形成矿化气泡，剩余的矿浆流向下一槽，直到最终成为尾矿。

When flotation machine is working, with the rotation of the impeller, groove pulp from all around and via the bottom of groove is inhaled into between the impeller blades by the impeller bottom, at the same time, by the blower for the low pressure air by hollow shaft and impeller air distributor also enter it. After pulp mixing air fully, it is pushed from the upper part of the impeller to the oblique, and the stator stabilizes the flow and directs it into the whole trough. Bubbles rise to the foam stability region, after concentration process, the foam from the overflow weir gravity overflow then into the bubble bath, and part of the pulp flow to the lower part of impeller, then through the impeller stirring, to mix mineralization bubble formation, the rest of the pulp flow to the next trough, until eventually residue.

SPIRAL CLASSIFIER

螺旋分级机

单螺旋分级机、双螺旋分级机螺旋分级机根据溢流端的螺旋叶片浸入溢流面深浅程度不同，可制成下列二种：

溢流端螺旋叶片的顶部高于溢流面，且溢流端螺旋中心低于溢流面。主要用于溢流粒度为25—120目的矿石分级；

溢流端的螺旋叶片全部浸入溢流面以下。主要适用于溢流粒度为120—200目的矿石分级。

There are two types of spiral classifier: single spiral classifier and double spiral classifier According to the spiral blade at the flooding end, there are two types:

1. Highweirtype: the top side of spiral blade is higher than the flooding level and the center of the blade is lower than the flooding level. This type is used for classification of ore with flooding size between 25—120mesh.

2. Immersed weir type: the whole spiral blade is immersed in the flooding end. This type is used for classification of ore with flooding size between 120—200mesh.

HIGH EFFICIENCY CONCENTRATOR 高效浓缩机

我公司生产的高效浓缩机适用于选矿厂的精矿和尾矿脱水处理，

把20—30%的矿浆提高到40—70%左右，广泛用于冶金、化工、煤炭、非金属选矿、环保等行业。

高效浓缩机实际上并不是单纯的沉降设备，而是结合泥浆层过滤特性的一种新型脱水设备。

The High Efficiency concentrator machine of our company is suitable for dehydrating water of the concentration and gangue in the concentrating factory, make themash of 20—30%raiseupto40—70%about. It is widely used for metallurgy, chemical, coal, nonmetal concentration, environment protected etc industry.

High efficiency concentrator machine is not only a settlement and a new type dehydrating equipment of combining the mash percolate.

CONCENTRATOR TABLE

摇床

摇床是用于选别细粒物料的重力选矿设备，广泛应用于选别锡、钨、金银、铅、锌、钽、铌、铁、锰、钛铁和煤等。我厂生产摇床历史悠久，并不断开发创新，从最初的直条床面摇床基础上发展到单曲波床面摇床（上世纪70年代），再到双曲波床面摇床（上世纪90年代），使摇床的处理量、回收率和富集比都有大幅度的提高。

Concentrator table used in selecting fine materials is heavy ore beneficiation equipment, which is widely used in selecting materials, such as tin wolframium gold argent lead zinc tantalum niobium iron manganese ferrotitanium coal etc. Concentrator table produced by company has a long history and develop innovation, from primal the straight bed table development to the single wave surface shaker (1970 s) then double wave surface shaker (1990 s) which improve greatly processing capacity recovery ratio and enrichment ratio of Concentrator table.

MIXING BARREL

搅拌桶

该搅拌桶是由电动机三角带传动带动叶轮旋转，将药物和矿浆充分混合均匀，增加药剂作用反应时间强化药物反应质量的必要设备，本机适用于选矿业，也可用作各种化工业的配料搅拌。

With V-belt of motor driving to impeller rotation, the mixer mixes drugs and ore pulp evenly, which is the key equipment in increasing the drug reaction time and improving drug reaction quality, the machine is suitable for mining and also can be used for mixing of all kinds of chemical ingredient.

AIR BOX PULSE BAG DUST COLLECTOR

气箱式脉冲袋收尘器

PPC型气箱脉冲袋式收尘器广泛适用于建材、水泥、冶金、机械、化工和耐火材料行业，特别适用于水泥厂的破碎、包装、库顶、熟料冷却机和各种磨机等收尘系统（或除尘系统），适用性较强。

PPC type air box pulse bag dust collector is widely suitable for building materials cement metallurgy machinery chemicals refractory material industry and especially is applied to crushing of cement factory packing top of the library clinker cooling machine and all kinds of mill dust collecting system(or dust removal system), with a strong adaptability.

DMC PULSE DUST COLLECTOR

DMC单机脉冲除尘器

DMC型单机脉冲除尘器采用脉冲喷吹的清灰方式，具有清灰效果高，处理风量适当，滤袋寿命长，维修工作量小，运行安全可靠的特点。

适用于各种工矿企业，非纤维性工业粉尘的除尘净化与物料的回收。

DMC-type single pulse duster adopts pulse blast cleaning method, which has high efficiency of cleaning ash, proper processing capacity, long life of filter bag, small maintenance work, safe and reliable operation. It is applied to all kinds of industrial and mining enterprises, dust removal of non-fiber industrial dust and material recovery.

ROTARY KILN

回转窑

回转窑是指旋转煅烧窑(俗称旋窑)，属于建材设备类。回转窑按处理物料不同可分为水泥窑、冶金化工窑和石灰窑。

水泥窑主要用于煅烧水泥熟料，分干法生产水泥窑和湿法生产水泥窑两大类。冶金化工窑则主要用于冶金行业钢铁厂贫铁矿磁化焙烧；铬、镍铁矿氧化焙烧；耐火材料厂焙烧高铝钒土矿和铝厂焙烧熟料、氢氧化铝；化工厂焙烧铬矿砂和铬矿粉等类矿物。

石灰窑(即活性石灰窑)用于焙烧钢铁厂、铁合金厂用的活性石灰和煅烧白云石。

The rotary kiln belongs to construction equipment. According to different materials, the rotary kiln can be divided into: cement kiln, metallurgy kiln and limestone kiln.

The cement kiln is mainly used for calcining of cement clinker; there are dry and wet types. The metallurgy kiln is used in metallurgy industry and ironworks for lean iron ore, chromium ore and ferronickel ore Calcimine. Rotary kiln is used for calcimine of high aluminum Vandal ochre refractory material industry; for calcimine of calotite and aluminum hydroxide in aluminum manufacturer; for claiming of chrome sand ore and Chrome powder ore in chemical Plant.

The lime kiln(activelime kiln) is used for roasting the active lime which is used in steelworks and ferroalloy works, and calcined dolomite.

LIME ROTARY KILN

石灰回转窑

结构先进，性能稳定的竖式预热器能有效提高预热效果，经预热后的石灰石入窑分解率可达20—25%，并可直接利用10—15mm细粒级石灰石；可靠的回转窑两端组合式鳞片密封。使漏风系数小于10%，使用复合型耐火材料，以减少辐射热损失；填充式、可分区通风的圆形或方形竖式冷却器，使出冷却器的石灰温度为80~C+环境温度，便于输送、储存，并可将入窑二次空气预热到700℃以上，充分利用余热，节省能量消耗。

The lime kiln is with advanced structure. Preheater with low-pressure loss and stable performances and can improve preheating effect efficiently. After preheating, the resolution ratio of the limestone can reach 20—25% when they enter the kiln. Besides, the limestone, with the fine fraction about 10—15mm, can be used directly. The two sides of the reliable rotary kiln are sealed by the combined scales, which can make the air leakage coefficient less than 10%. Composite refractory materials should be used in order to reduce the loss of radiant heat. The filling vertical cooler, round or square, can be zoned—ventilation, which can make the temperature of limestone in the cooler at about 80°C. As a result, it is very convenient to transport and store. It can also preheat the secondary air up to the temperature at above 700°C; then the waste heat can be recycled to reduce energy consumption.

ROTARY DRYER

回转烘干机

回转烘干机主要用于选矿、建材、冶金、化工等部门烘干一定湿度或粒度的物料。回转烘干机对物料的适应性强，可以烘干各种物料，且设备操作简单可靠，故得到普遍采用。

Rotary dryer is used for drying material with a certain degree of humidity or granularity in concentrating, construction, metallurgy and chemical plant etc. Rotary dryer is strong adaptable to material and can dry all kinds of materials with easy-to-operate and easy-to-maintain, so it is widely used.

MONOCULAR COOLER

单筒冷却机

单筒冷却机是回转窑系统中重要设备之一，该设备的作用是将从回转窑出来的熟料（1000~1300℃）冷却到（200℃以下），同时提高熟料质量和易磨性。

Monocular cooler is one of important equipment in rotary kiln system and the function of monocular cooler is cooling clinker from rotary kiln to low 200°C from 1000~1300°C, at the same time improve the quality of clinker and grinding.

NEW TYPE DRY CEMENT PROCESS

新型干法水泥工艺流程

新型干法水泥技术是以悬浮预热和预分解技术装备为核心，以先进的环保、热工、粉磨、均化、储运、在线检测、信息化等技术装备为基础；采用新技术和新材料；节约资源和能源，充分利用废料、废渣，促进循环经济，实现人与自然和谐相处的现代化水泥生产方法。

New type dry-process kiln technology is a modern cement production method. It takes cyclone preheater and precalciner as its kernel, based on the advanced technical equipment of environment protection, thermal, powder-grinding, homogenizing, storage and transportation, live testing and information technology, etc. It adopts new technology and new materials and makes full use of waste and residue, saving resources and energy, promoting the recycling economy and realizing the harmony between man and nature.
